

# SIGNALING IN THE IMMUNE SYSTEM:

Lymphocyte signaling from  
development to effector function

12 - 16 September | 2009 |  
Certosa di Pontignano (Siena)|  
Italy

This 2nd EMBO Conference of the series "Signaling in the Immune System" will explore the nature and complexity of intracellular and intercellular signals which determine lymphocyte development and differentiation.

The conference will be focused on the mechanistic and topological orchestration of signaling by antigen receptors and costimulatory receptors, and their integration with the cytokine receptor networks which drive lymphocyte commitment to a specific lineage or differentiation to a specific type of effector.
